

Suggestions for project summary for Arctic Competition 2018

When your student prepares his/her summary, you may be asked for various information. We are aware that at the first stage of the Competition you as a team submit a summary and not the full project, so your student will probably only be able to describe his/her ideas for the project. This is quite ok.

What should be included in the summary? Maybe you can get some ideas from this list:

1. Subject. Describe the subject of your project. What are you curious about in the Arctic?
2. Hypothesis. Suggest an hypothesis, why is it like this?
3. Plan. How do you plan to answer your hypothesis? Make a (research) plan to collect information.
4. Information. You will need information, - how will you collect this information?
5. Results. If possible at this early stage you could say some words about how you plan to sum up your results?
6. Presentation. Do you have some ideas how you would like to present your results? For instance essay, poster or video.

You can use [the Curiosity-Method](#) as inspiration for the summary and especially for the whole project.
